

“Missing Units”

Units that we would have liked to have included in the first version of the Level 3 Fish and Shellfish SVQ, but were unable to, include:

- Monitor oil frying operations
- Monitor the reception and holding of live fish/shellfish
- Principles of controlling bivalve purification processing
- Principles of fishmonger practice
- Principles of managing fish and chip operations
- Principles of managing safety in bivalve purification operations
- Principles of the fishmonger industry

These units will be added as soon as possible, probably in mid-2014.
